

What is an Accessible Vaccine Kit?

The Autism Society of America's Accessible Vaccine Kits support sensory, communication, and social differences. These kits help provide a more positive vaccination experience for all ages.

Kits include a variety of calming and sensory tools:*

Noise-Reducing Headphones – to help manage sound and balance

ShotBlocker® – a non-invasive tool that lessens the pain and anxiety of needles

Stress Ball – to support self-regulation and decrease anxiety

Fidget Spinner – to support self-regulation and decrease anxiety

Sunglasses – to help manage light sensitivity

Stickers – to give a reward

*subject to change based on availability of individual components

Please note: Kits do NOT include the vaccines nor needles.
